Don Paul's Review

"I know there are many thousands of weather fans/'geeks' in WNY. This is the book for you! Dr. Stephen Vermette has written by far the most complete compendium on WNY weather I have ever seen, also including vital basics on meteorology. Vermette is a Buffalo State professor who takes a multi-disciplinary approach to both our climatology and meteorology. He is an award-winning scientist who writes very well for the layperson.. I highly recommend it - perfect gift for the WeatherGeek in your family!"
